SUMMARY

Frontend Engineer with 6+ years of deep React expertise — architecting scalable frontend systems, optimizing performance, and mentoring engineering teams. Currently expanding into React Native, building on hands-on exposure reviewing and collaborating on React Native codebases at Boxy, with a strong, self-driven commitment to mastering mobile engineering. Skilled in microfrontend systems, component-based architecture, and building reusable component libraries and design systems using accessible UI frameworks (Ant Design, MUI). Strong track record of leading technical design, driving engineering standards, and collaborating with cross-functional teams in Agile environments, with hands-on experience integrating third-party identity/auth systems (OAuth2/SSO), delivering SSR-optimized applications with Next.js, and building financial transaction UIs (withdrawals, transaction history) within a logistics SaaS platform.

EXPERIENCE

Boxy (Logistics SaaS Platform) UAE / Iraq

Senior Frontend Engineer Oct 2024 – Present

- Developed data-driven merchant dashboards and shipment tracking systems using React and TypeScript, including Mapbox location tracking and Recharts visualizations, for logistics operations across UAE and Iraq
- Built UI for wallet, transaction history, and withdrawal request modules, consuming and displaying financial data from backend APIs within the logistics platform
- Took ownership of inherited bulk order import module, resolved 15+ critical issues and refactored core logic reducing page load time by ~50%
- Led frontend architecture decisions, enforced coding and engineering standards through code reviews, and drove refactoring initiatives across multiple modules, improving maintainability and reducing technical debt
- Collaborated with mobile engineer on React Native codebase, reviewing logic based on shared React expertise, and sharing reusable component patterns across web and mobile
- Leveraged AI-assisted development tools (Cursor) to accelerate refactoring and feature delivery, reducing estimated sprint cycle time by ~30%
- Supported frontend CI/CD workflows and maintained deployment pipelines in a distributed SaaS environment

Zynx Health (Healthcare Software) USA

Contract Frontend Engineer Jul 2024 – Sep 2024

- Built a dynamic form builder for physicians using Svelte, supporting multiple field types including dropdowns, checkboxes, radio buttons, and text inputs with configurable options
- Wrote a custom wrapper layer around Syncfusion components to make them behave like standard UI libraries (Ant Design / MUI style API), working around Svelte compatibility limitations imposed by the team
- Delivered accessible and reusable UI components under a tight 3-month contract timeline

Espad (Enterprise Platform) Iran

Senior Frontend Engineer Jul 2021 – Jun 2024

- Designed and implemented microfrontend architecture using Module Federation and a pnpm-based monorepo, splitting a large enterprise platform into two independently deployable apps sharing a common, reusable component library across teams
- Implemented frontend-side OAuth2/OpenID Connect authentication flow (redirect-based authorization code flow), including JWT-based session handling, secure token storage, and login redirects with the identity provider
- Built an environment-aware gRPC debug panel in collaboration with tech lead, intercepting and logging API calls in dev/staging environments — effectively a custom Network tab for gRPC traffic
- Served as the go-to for code reviews and technical mentorship across a 6-person frontend team, handling onboarding for new engineers and participating in technical interviews alongside the team lead
- Styled components using SCSS Modules (styles.className pattern) to ensure scoped, conflict-free styling, while following accessibility best practices (semantic elements for interactive UI, such as button/link usage)

Khishavere *Iran*

Frontend Engineer Aug 2019 – Jul 2021

- Built a PWA for a counseling platform with offline video playback using IndexedDB and push notifications via Firebase, supporting installable experience on both mobile and desktop
- Built the platform's main marketing site using Next.js for SEO optimization, while the core application panel was developed in React
- Delivered pixel-perfect UI implementations consistently praised by the design team

EDUCATION

Hamedan University of Technology B.Sc

Computer Software Engineering 2015 – 2019

SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), Next.js, React Query, State Management (Zustand, Redux, Redux-Saga), Svelte, Responsive Design, UI/UX Implementation, Tailwind CSS, shadcn/ui, SCSS/Sass (CSS Modules), Styled-Components (CSS-in-JS), REST APIs, GraphQL, HTML5, CSS3, React Native (familiarity), Bootstrap

Architecture & Systems: Microfrontends, Module Federation, PWA, Frontend Architecture, Performance Optimization, Scalable UI Systems, Component-Based Architecture, Reusable Component Libraries

Security & Auth: OAuth2, OpenID Connect (OIDC)

Testing: Jest, Vitest, Playwright, TDD (Test-Driven Development)

Tools & Workflow: Git, GitHub, Storybook, Figma, Sentry, Webpack, Vite, ESLint, Prettier, GitHub Actions, CI/CD

Data Visualization & Maps: Recharts, Mapbox GL JS, React Map GL

Methodologies: Agile, Scrum
